Python Data Type

- Data types are basic building blocks to construct a large piece of code.

- Each language has its own data types.

Types of Data types

- Here is few list of data types

1) Integer

2) Floating point

3) Strings

4) Lists

5) Dictionaries

6) Tuples

7) Set

8) Boolean

Numbers

- In Python we have different set of numbers.
- We can perform mathematical operation on strings.

Python code

- Using Python environment to make the that sum two integers.

- Take the output of step 1 and multiple it by 3 show the final results
